DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over McNamara et al. (6,007,996) in view of Cabib et al. (5,539,517).

McNamara et al. describe an in situ method of analyzing cells comprising:

a sample;

a source for illuminating said sample and causing regions in the sample to emit radiation at a second wavelength (fluoresce)'

an interferometer (Fig. 2) with a beamsplitter (33);

a detector array (37);

a processor (28).

McNamara et al. do not expressly show that the mirrors of the interferometer has rotating mirrors, however McNamara discloses that the interferometer is disclosed in US Patent 5,539,517 (Cabib et al.) and in Cabib et al, it is disclosed that the mirrors are rotating mirrors, thus it would have been obvious to one of ordinary skill in the art that the mirrors of McNamara et al. are rotating mirrors.
